SCOTT JUE

scott.g.jue@gmail.com • (650) 823-8955 • San Diego, CA • linkedin.com/in/scottjue • Portfolio: scottjue21.github.io/portfolio

SKILLS

Programming & Querying: SQL (CTEs, window functions, aggregations), Python (Pandas, NumPy)
Data Warehousing, Modeling & BI: Snowflake, dbt, SQL Server, Power BI (DAX, Power Query), Tableau, Excel (Pivot Tables), Alteryx
Workflow, Orchestration & Development Tools: Prefect, SQLMesh, Git/GitHub, Cursor

RELEVANT PROFESSIONAL EXPERIENCE

La Jolla Institute for Immunology **San Diego, CA**
Senior Data Analyst, *Financial Planning & Analysis (FP&A)* Jan. 2021 - Present

- Lead development of SQL-based data pipelines, reporting systems, and automated analytics workflows supporting financial operations for a $90M biomedical research organization developing treatments and vaccines for autoimmune disease, cancer, and infectious disease
- Designed a unified Core Facilities P&L reporting pipeline in SQL (stored procedures + validation layer) that automated YTD financials and enabled self-service reporting for leadership, reducing manual effort by 80%+
- Built a parameterized SQL report for YTD Budget vs. Actuals variance analysis with built-in validation logic (period bounds, account/department scope, fiscal-year overrides), enabling self-service reporting across 50+ departments and eliminating ~6 hours of manual spreadsheet preparation per reporting cycle
- Developed a SQL-based Admin Payroll report for Indirect Cost Rate (IDC) reporting with built-in validation (period bounds, account/department scope, fiscal-year overrides), reducing manual prep by ~88% and improving audit readiness and consistency
- Built ETL automated workflows in Alteryx to unify siloed data scattered across HR, Effort Reporting, and General Ledger Accounting systems; automated data cleansing and validation tasks resulting in higher data quality and accurate, reliable reporting
- Optimized quarterly forecasting reporting by creating new workflow to integrate up-to-date effort allocation data; improved data refresh cadence from annual to quarterly
- Reengineered Indirect Cost Rate model to optimize for new reporting requirements using Excel (VLOOKUP, INDEX-MATCH, IFERROR, nested IF) to automate data retrieval; leveraged dynamic TEXT formulas to auto-generate explanatory fields and narrative text, improving efficiency and reducing reporting turnaround time by 33% from 3 to 2 weeks
- Collaborated with accounting and BU managers to resolve expense-type miscoding in variance reporting, reducing underspend and overspend discrepancies due to incorrect coding from 10% to 0%
- Reduced liability by $8.3M over 4 years by identifying and correcting effort reporting discrepancies on research grants

Senior Financial Analyst, *Financial Planning & Analysis (FP&A)* Feb. 2013 - Dec. 2020

- Provided critical financial analysis and insights to support strategic decision-making for operations and finance; created, automated, and standardized FP&A reports, 5-year revenue and expense forecast models, quarterly financial reports
- Managed institute-wide annual budgeting process ($90M) & Indirect Cost Rate proposals; collaborated with 30+ stakeholders to ensure strategic alignment and compliance with NIH grant regulations & OMB's Uniform Guidance
- Created Indirect Cost Rate Proposal calculations, budget templates, and performance dashboards using advanced Excel functionalities, including complex formulas and VBA
- Empowered C-level executives by developing 15 executive dashboards covering revenue and expense performance, grant application volume and success rates, revenue mix, and fundraising efficiency, enabling data-driven decision-making for financial stability and strategic planning.
- Streamlined Accounting budget import process; utilized Excel VBA to auto-consolidate data inputs from 50+ departments, reducing Accounting staff's manual data entry time by 100% and achieving a fully automated process with 0% error rate
- Optimized systems infrastructure to support analytical and reporting needs; identified key financial processes and translated reporting requirements into technical specifications in Jet Reports for automating monthly and quarterly financial reports
- Conducted financial modeling for strategic initiatives, including KPIs, cash flow forecasting, salary adjustments, CapEx and revenue diversification; collaborated with 30+ dept leaders to enhance forecasting accuracy & effective budgeting

Calibr-Skaggs Institute for Innovative Medicines **San Diego, CA**
Financial & Operations Analyst Feb. 2012 - Nov. 2012

- Managed annual budget process for $13M operation; developed financial forecasts and prepared financial statements to enable data-driven decision-making and strategic resource allocation for growth initiatives
- Implemented and optimized the foundation for accounting and payroll/HR systems; designed initial chart of accounts, streamlined financial operations and enhanced organizational efficiency in the startup's critical early stages
- Developed and launched end-to-end Point Purchasing system, resulting in significant supplies cost savings and designed purchasing policies and approval procedures to ensure robust internal controls, supporting financial stability and regulatory compliance

ANALYTICS ENGINEERING PORTFOLIO PROJECTS

- **CRM Sales Data ELT Pipeline (Airbyte, dbt, Snowflake, Prefect, SQL, Python)**

  Built an automated ELT pipeline integrating CRM sales data via Airbyte into Snowflake and transforming it with a dbt layered modeling architecture (staging → intermediate → core) to produce analytics-ready warehouse datasets with standardized business logic.

  • Implemented validation checks, type casting, and standardization logic to ensure data accuracy and pipeline reliability

  • Orchestrated scheduled pipeline runs with Prefect and monitored execution to troubleshoot failures

  • Used Python to validate ingested data, perform data quality checks, and support pipeline monitoring alongside SQL/dbt workflows

  • Produced analytics-ready datasets enabling self-service reporting and analysis

- **Airbnb Analytics Engineering (SQL, dbt, Snowflake, Tableau)**

  Developed a warehouse modeling layer using Inside Airbnb data, ingesting raw CSVs into Snowflake and building staging, fact, and dimension models in dbt following dimensional modeling principles.

  • Implemented dbt tests and documentation to ensure data quality, lineage clarity, and consistent metric definitions

  • Created analytics-ready fact and dimension models supporting consistent KPI definitions and business performance analysis

  • Designed Tableau dashboards highlighting revenue trends, occupancy rates, and pricing patterns

- **Trail Trekker Data Pipeline (DuckDB, SQLMesh, SQL)**

  Built an automated data pipeline ingesting and transforming CSV data into DuckDB to produce analysis-ready datasets

  • Automated hourly pipeline runs using SQLMesh and Windows Task Scheduler

  • Implemented lightweight data validation tests and quality checks

  • Enabled operational visibility into plan changes and cancellations for growth team reporting

EDUCATION

Northwestern University **Chicago, IL**
M.S. in Data Science, specialization in Analytics & Modeling
Relevant Courses: Supervised Learning, Unsupervised Learning, Applied Statistics, Decision Analytics, Data Visualization, Database Systems and Data Preparation, Practical Machine Learning, Sports Performance Analytics, Project Management

Chapman University **Orange, CA**
B.S. in Business Administration, concentration in Finance & Entrepreneurship

CERTIFICATIONS

dbt Fundamentals — dbt Labs
Associate Data Engineer in Snowflake — DataCamp
Associate Data Engineer in SQL — DataCamp
Data Engineer in Python — DataCamp
Associate Data Analyst in SQL — DataCamp
Data Analyst in Power BI — DataCamp
Data Analyst Nanodegree — Udacity
Predictive Analytics for Business Nanodegree — Udacity
